Multi-Level Battery Charging Stands

Sackett's industry-leading multi-level charging stands, known for quality, durability and reliability, are considered the best on the market.

Sackett builds their multi-level charging stands with the highest specifications in the industry:

- 3"x3"x1/4" square tube uprights and a roller base frame constructed with 3-1/2" x 2-1/2" x 1/4" angles are standard on our multi-level charging stands
- Loaded with 2-3/8" diameter precision bearings and encased in a 1/4" thick polyethylene sleeve, Sackett's rollers come with a 3 year warranty.

Sackett's industry-leading Multi-Level Battery Charging Stands

For simplicity and ease of setup, all battery positions have SB connector brackets, drip pan holders and slots for cable routings. For safety, rollers are sloped to the rear to prevent the battery from rolling out of the compartment.

Available options include:

- Handrail and catwalk
- Ladders
- Drip pans
- Certified SEISMEC construction
- Rear charger platforms

“ A Word from One of Our Customers.....

My client, P&G Mexico, needed a complete battery handling system for their 750,000 sq. ft. distribution center in Mexico City, which is P&G's largest distribution center in Latin America. P&G Mexico's three main criteria were safety, productivity and overall cost. I researched four competitive companies for this job and Sackett Systems came out on top because they met all three criteria and then some, they had the best equipment...their Triple-Stack Hydra-Handler System ... and they would provide a full turnkey operation.

Working with Sackett has gone very smoothly ... including their working hard to accommodate the restrictions inherent in P&G's Mexico City plant. We were even able to upsell P&G to the high speed Triple Stack Centurion System which offered them higher performance, additional safety controls, smoother operation, proven technology and increased reliability. P&G Mexico is looking forward to operating their new state-of-the art Sackett Centurion battery handling system when it is installed in August."

Bruce Childs, President and Senior Consultant, TENNESSEE POWER SOLUTIONS

Power Distribution Panels

Organize and drive efficiency in the electrical layout of your battery room with Sackett's Power Distribution Panels.

Installed on the back of your charging stands, Sackett's distribution panels save money, improve safety, and promote organization in your battery charging area.

Company History

The Sackett tradition of durability, quality and reliability began in 1897, when the company was established in Chicago, IL as H.B. Sackett Screen and Chute Co. Serving the coal industry, we produced Hi Carbo steel chutes and screens. In 1913, our Loading and Screening Outfits were timed to empty, deliver and screen 3 to 5 tons of coal from silos in 1-1/2 to 3 minutes - a record that still stands.

From the coal industry, Sackett branched out to providing the paper mill and concrete distributing industries with material handling equipment.

"Tempered Point" Coal Shovel

In the 1950's, Sackett Systems became an innovator in battery handling equipment, developing, among other systems, the first lifting beam, transfer cart, battery roller stand and battery changing system. Over the years, Sackett has developed many of the industry's most innovative products.

2007 saw the debut of Sackett's revolutionary super-efficient fully-automated Northstar System, an unmanned battery changing system which changes batteries in one minute or less and can safely store batteries up to 10 high.

Upcoming Events

[ProMat 2009](#)
McCormick Place
Chicago, IL
January 12-15, 2009

Cost savings:

- Electrical installation costs typically reduced by 15-25%
- Maximizes electrical capacity
- Reduces size and number of breakers in main panel

**Safety:**

- Turn off breaker right at charging location instead of main panel
- Chargers can also be disconnected at Hubbell connector
- Optional lockout/tag-out provisions available

Sackett's Power Distribution Panels
save money, improve safety
and promote organization

Organization:

- Neat routing of AC cables
- Eliminates raceways, conduit and their installation
- Provides easy access to circuit breakers
